

Assignment 2

Middle Eastern Cuisine Ontology

The Ontology is on cuisines and dishes from all around the Middle East, with the basic dishes from Middle Eastern countries. I had categorized the cuisines based on Middle Eastern Regions (North Africa, Gulf, and the Levant), divided cuisines into savory and sweet dishes, within these categories are different types of beef and chicken and vegetable dishes, also a separate category for signature well knows Middle Eastern dishes.

In the object properties, I had used the inverse property to show of the if the recipe of the meal contains veg or meat, with the sub domain and intersecting domains as well.
